involves separating a mixture
based on different sizes of
components, where smaller
fragments pass through holes in the
sieve but large fragments do not.
Filtration is a special form of sieving
where filter paper is used to trap
very fine solid particles (residue)
from the rest of a liquid or gas
mixture (filtrate). Separating

A technique used for separating components of a mixture (usually a mixture of solids)

based on differences in their particle size. The sample is passed through a utensil made of wire mesh or closely perforated metal.

The larger solids remain in the utensil while the smaller solids pass through. Click again to see term
